### GCS Targets Power Conditioning and Protection with *PowerGUARD* Products – for Immediate Release

Governor Control Systems, Inc. (GCS) is proud to announce that they are a POM *PowerGUARD* authorized distributor, serving the Southeast, Mid-Atlantic, Gulf Coast, Pacific Northwest states, Caribbean and Central America.

POM *PowerGUARD*™ is an inductive reactor using unique magnetic choke technology to combine the benefits of lightning protection, surge suppression, harmonic filtering and power factor correction into one simple-to-use module. The units are Electrical Testing Laboratory (ETL) rated 20,000 amps.

*PowerGUARD*™ is an energy solution that does much more than capacitor, harmonic filters or TVSS systems; it improves power quality and protects plant equipment. The damaging effects of poor power quality and voltage or current spikes cause equipment to work improperly or not at all and can cause frequent trips and shutdowns that shorten equipment life. *PowerGUARD*™ saves energy costs and reduces the plant's carbon footprint.

Ben Lozano, Vice President of GCS, stated, "The addition of *PowerGUARD*™ to the GCS product line ensures we offer our utility and generation customers a solution to some of the challenges facing power producers today. We look forward to working together to serve our customers."

About GCS Founded in 1998, Governor Control Systems, Inc. (GCS) is a privately held company, specializing in the design, Installation, service, and repair of rotating and reciprocating equipment control solutions for marine and land-based power generation industries. Headquartered in Fort Lauderdale, Florida, GCS offers a comprehensive range of solutions and products for the service, repair, and system upgrades of engine and turbine control and monitoring equipment. GCS is part of the MSHS Group, providing innovative, turn-key solutions for prime movers.
